

DYLAN JOSUÉ JIMÉNEZ TORRES

Full Stack Developer

Parrita, Costa Rica | dylantorresatv04@gmail.com | +506 6447-3746 | github.com/DylanTorres03 | dylanjcodes.xyz

PROFESSIONAL SUMMARY

Full Stack Developer from Costa Rica. I've shipped real software: a supplier platform integrated with Zoho CRM at Global Events, a payment tracking feature at SmarterSelect (a U.S. company), a workshop management system used by 20+ users and 2,200+ orders at Corporación 2001, and Rutio, a fleet-management SaaS I founded and built from scratch, live at rutiocr.com. Comfortable with JavaScript and Node.js day to day, with working experience in TypeScript, Python, and React. I also build side projects using AI tools like RAG chatbots and use Claude Code to move faster while owning the architecture and decisions myself.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript (working experience), Python, C# (basic exposure), Java

Frontend: React.js, Next.js, HTML5, CSS, Responsive Design, React Native, Expo

Backend: Node.js, Express, Python, FastAPI, Ruby on Rails, REST APIs

Databases: PostgreSQL, MongoDB, Supabase, ChromaDB

AI / Personal Projects: RAG architecture, OpenAI GPT, HuggingFace, semantic search, effective use of AI coding assistants (Claude Code)

Tools & DevOps: Git & GitHub, Docker, AWS (S3, Lambda, API Gateway, RDS), Vercel, Zoho CRM API, OIDC, RSpec, Agile/Scrum

Languages Spoken: Spanish (native), English (B1 — professional reading/writing)

WORK EXPERIENCE

Full Stack Developer — Global Events CRC — Hybrid, San José, Costa Rica

July 2026 – August 2026 (2 months)

- Worked on an external supplier management platform for Global Events, built on top of Zoho CRM's official API.
- Built core features in Next.js and TypeScript to centralize supplier data that was previously scattered across manual Zoho records.
- Worked on a proof-of-concept for OIDC login between the platform and Zoho CRM.
- Sat down directly with business stakeholders to turn what they needed into actual technical decisions.

Software Development Intern — SmarterSelect — Remote (U.S. company)

September 2025 – December 2025 (4 months)

- Built a payment timeline feature in Ruby on Rails that shows clients the exact status of each payment in real time, instead of them having to email support to ask.
- Built an activity log that records every change to payments, users, and other key records across the platform.
- Wrote 16+ RSpec test files across models, controllers, and services, catching regressions before they reached production.
- Worked daily with senior engineers over Basecamp in a fully remote, asynchronous team.

Full Stack Developer — Corporación 2001 — Hybrid, Costa Rica

March 2025 – November 2025 (9 months)

- Co-developed a workshop management system with a fellow developer, replacing a fully paper-based process (client intake, vehicle history, repair orders) with a web app.
- System has processed 2,200+ service orders for 20+ active users, including corporate clients like Bimbo and ICE.
- Built REST APIs with Node.js, Express, and PostgreSQL, and deployed on AWS (S3, Lambda, API Gateway, RDS).
- Added a web scraper to auto-fill vehicle data by plate number, cutting a manual entry step the front desk used to do for every new client.

PROJECTS

Rutio — Fleet Management SaaS — rutiocr.com

- Founded and built Rutio, a fleet management SaaS live at rutiocr.com, with a company dashboard, a driver portal, and live GPS tracking.

- Built the live GPS tracking with Google Maps API — company dashboard in Next.js + TypeScript, driver app in React Native/Expo, deployed via EAS.
- Built a multi-tenant backend on Supabase for auth, storage, and real-time data; used AI coding tools (Claude Code) to move faster while owning the architecture and every technical decision.

Intelligent CV Chatbot — AI / RAG Architecture

- Built an AI-powered chatbot using a Retrieval-Augmented Generation (RAG) architecture with semantic search (ChromaDB, HuggingFace) to process and analyze resumes automatically, served through a FastAPI backend.

Azzurri — Jewelry Catalog & Storefront — azzurrijoyeria.com

- Rebuilt a jewelry brand's entire product catalog from a 176-slide Canva deck into a real site with filters, favorites, a blog, and a checkout flow that auto-generates a WhatsApp order message.
- Connected Claude Code to Figma (via MCP) and to Sanity CMS so the business owner can manage products, photos, and stock herself.

EDUCATION

Bachelor's Degree in Information Systems Engineering

Universidad Latina de Costa Rica — Graduated April 2026 — GPA: 93/100
